

Acknowledgements

I gratefully acknowledge the financial support from the Department of Science and Technology, Ministry of Science and Technology, Government of India, without which it would not have been possible for me to undertake this book-writing project. The administration of the Indian Institute of Science, Bangalore, and the Department of Mathematics, provided infrastructural support for which I am extremely thankful. During my visit to the University of Oulu, Finland, in 1997, I collected lot of material relevant for this book. I sincerely thank my host, Professor Erkki Laitinen and Department of Mathematics, Oulu, for their kind hospitality. The idea of writing this book nucleated during my visit to University of Rosario, Argentina, in 1991, and fructified 11 years later. I thank Professor D.A. Tarzia, Department of Mathematics, Universidad Austral, Rosario, for sending me the bibliography prepared by him, and some reprints which I could not get from other sources.

I am grateful to Professor Adimurthi, Department of Mathematics, TIFR, at IISc, Bangalore, and Professor A.K. Lahiri, Department of Metallurgy, Indian Institute of Science, Bangalore, for reading and responding to some portions of this book. My grateful thanks to Dr. Thomas Chacko, Professor of English and Communication Skills, Department of Management Studies, for style editing this volume with a great deal of attention. There are many old friends and well-wishers who sent reprints and preprints that proved very useful for me. Without naming them individually, I thank all of them for their selfless help.

I thank the Publishing Editor and staff of Elsevier and the Series Editor Professor J.D. Achenbach of the book series 'Applied Mathematics and Mechanics' for their cooperation.

The excellent typing in Latex and drawing of figures in computer graphics were done by Susheel Graphics, Bangalore. Without their cooperation the work would not have taken the final shape.

I dedicate this New Edition to my wife whose constant inspiration and support helped me in completing this long-term project. In the initial stages the help rendered by Dr Bryan Davis, Solutions Production Director, Science and Technology Series, Elsevier and at the later stage the constant cooperation given by the Editor, Dr A. Koch and the Project in charge, Ms Amy Clark is gratefully acknowledged. The offer from the Chairman Department of Mathematics, Indian Institute of Science, Bangalore, to use some of available facilities of the Department and some contingency grant from the Centre of Continuing Education, Indian Institute of Science, Bangalore, is an unforgettable experience for a retired Professor. Without naming any individual, I thank the authors who sent me reprints. The production of the manuscript was well handled by S&T book production centre at Chennai, Tamil Nadu, India.
